Dr. Lyman Toulmin
Geology Department
College Station, Texas

Dear Dr. Toulmin:

I have obtained slide of fossils from Salt Mt. This slide contains six specimens of a new Terebratulina, six specimens of Argyrotheca, and one other brachiopod. If you happen to come over to Austin some time I would appreciate it if you could identify these specimens with the new species which you are describing. I am now working on the brachiopods for the Tertiary card catalogue and have obtained several interesting results. I wonder if it would be possible to include your new species in the catalogue so that we may have a complete set of the brachiopods.

Very sincerely yours,

H. B. Stenzel, Geologist
