Prof. H. Stenzel
Univ. of Houston
Houston 4
Texas

Dear Prof. Stenzel.

As usually I have always a little trouble when I am hunting certain fossils here in our and in the Riksmuseum's collections. Therefore please excuse me that I borrow you to give me more information. I hope that you have the little but valuable copy of Richard Hägg 1924 "Svenska Kritbrachiopoder och Kritmollusker i Hisingers samling". On page 13 he named *Ostrea incurva* Nilsson as a synonym of *Ostrea acutirostris*. Hisinger's original is in the collection of the Riksmuseum and is named there *Ostrea acutirostris* Nilsson. Please let me know if this is right and what is the different between *O. acutirostris* and *incurva*. The original of Hisinger will be mailed already to-morrow to you. If you need more material of *O. incurva* please let me know. Have you a copy of Hägg's paper?

With the best regards.

Sincerely yours

F. Brotzen
